

*Safely Executing Turn-key  
Solutions Through Value Driven,  
Integrated Specialty Services.*

FABRICATION

RCS presently has (2) Fabrication facilities located in Port Arthur, TX, and Deer Park, TX. With over 40,000 Sqft of dedicated fabrication space, the priority of these shops aims to support the immediate needs of our field projects and to offer emergency response services to our clients. RCS offers turnkey fabrication services for coded and non-coded piping, Carbon Steel and all Alloy's including Monel, Inconel, & Super Duplex materials. This capacity affords RCS the ability to produce up to 1500 spools per month along with pipe components, hater and furnace tubes, skids, supports, small pressure pots, drums, nozzles, and specialty pieces. RCS understands how critical emergency work is, and places great emphasis on getting those items correct and delivered on time. RCS's fabrication strategy is enhanced by utilizing external cut shops and process (Material) flows that allow for the maximization of shop floor space & throughput capacities. These qualities in combination, allow RCS to maintain better control of materials and deliver a quality product.
